FirePro.

Records Management

Documents, manuscripts, primary research, contracts, invoices and other sensitive data.

Archives and libraries, where documents, manuscripts, research papers and books are stored are areas that need to be well protected against fire. The high fire load of this hazard requires the implementation of a particularly multifaceted fire safety system. In addition to ensuring human safety, fire safety must be a priority in order to protect invaluable and often irreplaceable documents.

Many fire suppression systems can cause collateral damage or even destroy the very assets that they are expected to protect. Consultants and fire specialists require a reliable fire suppression system that that not only safeguards assets but also prevents any potential collateral damages. FirePro fire suppression systems with their characteristics have repeatedly proven to be the best-in-class choice to match these tough prerequisites.

FirePro systems demonstrate exceptional speed in suppressing fires, reaching the required agent concentration within seconds. Speed and efficiency reduces structural and equipment damage, minimizing data loss and risk of injury to people working in the vicinity of fire. FirePro agent is electrically non-conductive, non-corrosive and what is more it is SNAP-listed and approved for use in normally occupied areas by the U.S.
