FirePro.

Retail

Electrical cabinets, transformers, equipment, control panels, warehouses, storage, electrical cabling.

It is crucial that in all retail outlets customers, personnel, operations and merchandise are safeguarded from fire. With retail shops, there are numerous design concerns to be considered within the sales floor and/or inventory space. Fire suppression engineers need to have the expertise to create customized, efficient and effective solutions for key assets such as electrical cabinets, transformers, general equipment, control panels, electrical cables and warehouses.

FirePro systems can detect and extinguish a fire at its source which is important in reducing the risk and damage to other critical assets and/or personnel. The modularity of the system allows it to be designed for both new and retrofit applications. Moreover, our extinguishing agent is environmentally friendly which reduces ecological concerns. As a bonus insurance companies offer operators reduced premiums when FirePro systems are installed.

A study can identify the exact areas of vulnerability in order to proceed with a tactical placement of equipment and an integrated fire safety system to provide complete protection to personnel, customers key assets; combined with a low inspection and maintenance costs we ensure that the system will successfully provide long lasting protection. Collateral damage often caused by traditional fire suppression systems is avoided and operational continuity is typically feasible

within hours.
